

SynCare is the only producer of derma - cosmetics in the Czech Republic that focuses its production exclusively on cosmeticians and pharmacies. A decision to distribute SynCare production exclusively to professionals proved to be correct. A trust devoted to the relation company - beautician was strengthened and at the same time this enabled us to sell the preparations that could not be commonly sold in shops (AHA peeling, pigment bleaching, etc.). The market with professional preparations has been increasing rapidly within the whole of EU and USA. While in the year 2005 the preparations for professionals represented only 6.5% of cosmetics market, in the recent five years an annual increase has been by 12.3%. In the year 2010 the total turnover related to professional preparations was nearly 1 billion €.

SynCare brand develops and manufactures special derma cosmetic products for medical care, professional beauty salons and personal care since 1996.

1997 - The first device for medical skin diagnosis
